At Riverside Home Care Services, intravenous (IV) drug therapy, previously administered only in the hospital, can now be administered in the home, thanks to remarkable innovations in "portable" technology. Our specially trained nurses can teach patients and caregivers how to safely and easily administer most forms of intravenous medications in the home. Patients enjoy economic benefits and greater involvement in their own health and recovery.

With the guidance of your physician, the staff of Riverside Pharmacy Services can prepare and administer the following Home Infusion Therapies:

- Antibiotic therapy;
- Antiviral and antifungal therapies;
- Corticosteroids;
- Hydration therapy;
- Immune globulin therapy;
- Inotropic therapy;
- Intravenous chemotherapy;
- Pain management;
- Enteral nutrition;
- Total parenteral nutrition;
- Catheter care management;
- Nebulizer medications for Medicare patients.

The pharmacy professionals at Riverside Pharmacy Services develop an individual therapy treatment plan based on your physician's orders. For hospital patients, the

hospital based transition nurse will assess a patient's condition before they go home, answer questions, and help plan for any necessary care. After patients arrive home, support continues with monitoring, patient education, and services to promote independence and comfort.
